

I build and run whole products, from the first idea to daily use. I talk to users, design, and engineer the full stack and infrastructure. Two are live today: Tourflow, the software two tour companies run their daily operations on, and hearted, an AI music product that organizes a listener's Spotify library. Before, I spent three and a half years at Mercedes-Benz.io, building their Me portal for vehicle owners.

WORK

2026
– NOW

hearted.music · Product engineer · own product

Consumer AI app for curating a Spotify library.

- Designed a matching engine that uses an LLM to profile each song from its lyrics, then matches it against playlists — each an aggregate of its songs plus a natural-language intent — with a deterministic weighted score over embeddings, audio features, and genre.
- Run it solo in production: an edge app on Cloudflare Workers, a background worker for the song enrichment pipeline, and self-hosted Postgres that is also the job queue.

TypeScript · React 19 · TanStack Start · Cloudflare Workers · Bun · Postgres + pgvector · Vercel AI SDK · Stripe

JAN 2025
– NOW

tourflow.pt · Product engineer · client product

Operations software for tour operators.

- Turned a booking-site contract into the operations platform two tour companies now run on daily: driver scheduling, trip logs, commissions, settlements, and client payments, with push notifications on a PWA.
- On the site, quadrupled booking conversion and made pages load 10x faster by migrating from Wix to Astro, served on Cloudflare.

TypeScript · React 19 · TanStack Router · Astro · PocketBase · SQLite · Stripe · Docker

2024

Career break: I stopped for a year to rest and figure out what I actually wanted going forward.

JUL 2020
– JAN 2024

Mercedes-Benz.io · Frontend developer

Mercedes Me, the customer portal for vehicle owners, built at their digital product company.

Worked on the portal's micro-frontends from scratch in Vue 2, replacing the legacy Angular app, then migrated everything to Vue 3 alongside continuous feature work, refactoring, and performance improvements.

Vue 2/3 · Redux · Lerna · Vite

SKILLS

Product	End-to-end ownership · customer discovery & scoping · UI/UX
AI	Multi-provider LLM pipelines · embeddings & pgvector · prompt & evaluation iteration · agentic coding workflows
Engineering	TypeScript · React · Vue · Node · Bun · TanStack · Tailwind · Postgres · SQLite · Docker · Cloudflare Workers · Playwright

EDUCATION

BSc Computer Engineering · Universidade Autónoma de Lisboa, Lisbon · exchange semester at AGH Kraków, Poland
